1.1 Galactic Studios does not take responsibility for any data that has been shared through third-party apps, application, organizations, or software.

1.2 Galactic Studios will and does not share any user data that is not needed for third parties to run their software / services on Galactic Studio's products and sites.

1.3 Galactic Studios never asks for information and data from the user that is not needed for any purposes. Any data which is confidential to the user (card details, addresses) will be deleted from our databases after they have been processed and used for their purpose. The data will not be deleted from third party databases. The action is put in place as we want to lower the chances of confidential information being leaked.

1.4 Galactic Studios will never take any information or data from a user that applies and says they are under the age of 13. Resultingly enforcing all GDPR, COPPA and all other child data protection organization's rules and laws.

2.1 If you need to for whatever reason want to or require your data to be deleted from all Galactic Studio's databases you may request at any time through the appropriate chain of communication. It may take a long time to delete your data (upwards of two weeks) Your data will not be deleted from third parties' databases you will need to contact them through a different chain of communication.

2.2 If you need a copy or want to request your user data, please contact Galactic Studios through the appropriate chain of communication. It may take a long time to get your data and communicate it back to you or the requester (upwards of two weeks).

3.1 If data is reported or found to be leaked users whose data was leaked will be made aware through a chain of communication.

3.2 Galactic Studios will investigate the leak and try and solve the issue and send a statement directly to all the users who had their data leaked. We will then try and resolve all damages done.

3.3 Galactic Studios does not take any responsibility for any data leaks even if it was explicitly Galactic Studios fault.
